Professional Summary

MSc Business Analytics candidate (University of Edinburgh, 2026) with two years of production analytics experience at a global automotive group. Currently developing ORAI, an AI-powered mental health documentation platform using GPT-4o, Supabase, and Next.js 15, applying clinical AI design and regulatory-aware data architecture. Client-sourced dissertation with Siemens Digital Industries on enterprise AI and RAG pipeline design. Combines hands-on data engineering, commercial analytics, and applied AI systems experience. Targeting UK Business Analyst, Analytics, and AI-adjacent roles.

Core Skills

Business Analytics:	KPI Design, Performance Measurement, Commercial Analytics, Forecasting, Stakeholder Reporting
Data and Tools:	SQL, Power BI, Python (Pandas, NumPy), Advanced Excel, VBA, FAISS, Docker
Analytics Methods:	Predictive Modelling, Classification, Time Series Analysis, Optimisation, Simulation
AI and Engineering:	LLM Integration (GPT-4o), Supabase, Next.js 15, REST APIs, RAG Pipeline Design
Professional Skills:	Executive Communication, Data Storytelling, Problem Structuring, Cross-Functional Collaboration

Professional Experience

Product Master Data Analyst I, Business Intelligence and Analytics

Sep 2024 – Aug 2025

LKQ India Private Limited (Euro Car Parts Group)

- Drove end-to-end business intelligence reporting linking catalogue operations, team productivity, and sales performance across US, Canada, and EU aftermarket portfolios, used in weekly and monthly decision-making forums with senior business owners.
- Delivered Power BI dashboards backed by SQL models, translating operational outputs into commercial KPIs; supported eight or more stakeholders across four international markets in recurring performance reviews.
- Spearheaded data enrichment initiatives across one million or more SKUs, improving catalogue readiness, product discoverability, and downstream sales usability.
- Optimised data validation and part-mapping workflows using Excel VBA and SQL, reducing turnaround time by 20 per cent and improving reporting reliability across global pipelines.
- Executed year-on-year and multi-year monthly trend analysis to assess seasonality, sales performance, and operational return on investment, with findings directly influencing capacity planning and prioritisation decisions.
- Collaborated cross-functionally with teams in the UK, US, Canada, and EU, aligning analytics outputs with global digital product and sales pipelines.

Data Analyst Apprentice, Data Quality and Analytics

Sep 2023 – Sep 2024

LKQ India Private Limited

- Analysed large operational datasets to identify trends, anomalies, and data quality gaps affecting downstream reporting accuracy.
- Built reusable SQL queries and Excel-based validation frameworks, reducing manual review effort and improving data consistency across OEM and aftermarket catalogues.
- Applied global automotive cataloguing standards including YMM, PCdb, VCdb, and attribute-based schemas across multi-regional product data.

Research and Dissertation

Client Sourced Dissertation, AI and RAG Pipeline Design

2025 – 2026

Siemens Digital Industries, University of Edinburgh

- Designing a dual-source Retrieval-Augmented Generation pipeline combining FAISS vector search and structured data retrieval, deployed via Docker with Llama 3 as the core language model.

- Working under NDA with Siemens Digital Industries, applying enterprise AI principles to a real industrial use case with direct industry supervision.

Education

MSc Business Analytics

2025 – 2026 (*Expected*)

University of Edinburgh Business School, Edinburgh, UK

Key coursework includes Predictive Analytics, Prescriptive Analytics using Mathematical and Stochastic Programming, Simulation Modelling, Data Envelopment Analysis, Machine Learning, and Natural Language Processing.

Bachelor of Engineering in Mechanical Engineering

2019 – 2023

Malnad College of Engineering, Karnataka, India

Developed strong foundations in quantitative analysis, systems thinking, operations planning, and optimisation techniques.

Academic and Analytics Projects

ORAI, Mental Health AI Platform *Personal Project, In Development*

Developing a clinical AI documentation platform for mental health practitioners, featuring GPT-4o-powered SOAP and DAP note generation, real-time C-SSRS risk flagging, and structured outcome tracking. Stack: Next.js 15, Supabase, Python, Deepgram speech-to-text. Data handling aligned with UK ICO/GDPR and Indian DPDP Act 2023 requirements.

NHS Blood Bank Inventory Optimisation *Stochastic Programming, Group Project*

Stochastic programming model for blood inventory management under demand uncertainty. Introduced a VMI benchmark comparison that became the paper's strongest empirical finding. Submitted April 2026.

NLI Classification System *Machine Learning, Group Project*

Hybrid LLM and gatekeeper natural language inference classifier evaluated on the MultiNLI dataset. Best system achieved approximately 90 to 91 per cent matched accuracy, outperforming standalone LLM baselines.

UK Banking Sector Efficiency, Data Envelopment Analysis *Group Project*

DEA across 91 UK banks (FY2024) using seven DEA models, network DEA, and meta-frontier extension, evaluated from a Prudential Regulator perspective. Dataset: S&P Global SNL Financial.

Bank Loan Repayment Prediction *Financial Analytics*

Classification models benchmarked on ROC-AUC and precision-recall metrics; outputs translated into actionable risk segmentation thresholds.

Scheduling and Optimisation Model *Operations Strategy*

Constrained optimisation model to generate efficient schedules under operational constraints, demonstrating applied decision-optimisation skills.

Awards and Leadership

- **Most Viable Business Award**, Startup Fast Track, University of Edinburgh and Edinburgh Innovations, November 2025. AfterWard: a post-medical follow-up platform designed to improve doctor-patient communication and recovery tracking; developed, validated, and recognised for real-world applicability and scalable impact within healthcare systems.
- Social Representative, Edinburgh Business School (2025 – 2026).
- Volunteer, European Chatbot and Conversational AI Summit (2026).
- Vice President, IUCEE EWB Student Chapter (2020 – 2023).
